

Addcrete
Coloured concrete specialists

A - Bond

Addcrete A - Bond is a water based, white acrylic polymer emulsion. It is used in Portland cement based mortars and concretes to improve water resistance, increase compressive, flexural and tensile strengths, improves bonding strengths and increases abrasion and impact properties of topping mixes. In cement based mixes it improves the plasticity and workability and will reduce bleeding. It will not impart any colouration.

A - Bond is also used as a promoter for cement based mortars, renders and toppings. It can be used as a sealer coat for existing concrete and as a curing compound for new cement mixes.

A - Bond will not break down in a moist environment and is ideal for exterior applications. It will help protect any pigment colours used from discolouration from UV radiation.

Advantages

- Increases water resistance.
- Promotes adhesion of after trades.
- Improves strength properties.
- Improves abrasion and impact properties.
- Reduces bleeding.
- Improves workability.
- Available in 20ltr, 5ltr, 2.5ltr and 1ltr containers.

Usage Ratios

| | |
|--------------------------|---------------------------------|
| Dosage: | 1 part product to 2 parts water |
| Sealer Coat | |
| Bond Coat | Use Undiluted |
| Modified Concrete | 1 part product to 3 parts water |
| Modified Render | 1 part product to 2 parts water |
| Bagging Mix | 1 part product to 1 part water |
| Bedding Mortar | 1 part product to 2 parts water |
| Modified Topping | 1 part product to 1 part water |

PRODUCT LIABILITY:

Prestige Concreting Additives P/L will not accept responsibility howsoever it may arise and whether consequential or otherwise in connection with supply or use of these goods other than the responsibility for the merchantable quality of the goods and such responsibilities mandatorily imposed by the applicable Statutes. To the extent allowed by such Statutes, the liability of Prestige Concreting Additives P/L is limited to the cost of the product purchased.
