

Plasticiser

Addcrete Plasticiser is a formulated honey coloured anionic surfactant solution used as an air entraining agent designed to improve the water retention and workability of cement based mortars or when extra plasticity is required when harsh sands are used.

Addcrete Plasticiser is suitable for use in all types of mortars using Portland type cement. It will help enhance pigment colour used in coloured mortars, unlike hydrated lime, which can fade coloured mortars.

Advantages

- Allows for easy placement of brickwork.
- Full colour achieved in coloured mortars.
- Improves workability.
- Reduces segregation and bleeding.
- Replaces the need for lime.
- Economical to use.
- Available in 20ltr, 5ltr, 2.5ltr and 1ltr containers.

Directions : Shake well before use. Add **Addcrete Plasticiser** at a rate of 25ml per 40kg bag of cement (up to 50ml per 40kg bag of cement can be used for uneven graded sand). Where some lime is retained in the mix OR some water reducing agent has been added, use half the amount of **Addcrete Plasticiser** (13ml per 40kg bag of cement).

Note : 1 cap full is approximately 15mls

Shelf Life : Stored in a cool place, shelf life is approximately 12 months.

PRODUCT LIABILITY:

Prestige Concreting Additives P/L will not accept responsibility howsoever it may arise and whether consequential or otherwise in connection with supply or use of these goods other than the responsibility for the merchantable quality of the goods and such responsibilities mandatorily imposed by the applicable Statutes. To the extent allowed by such Statutes, the liability of Prestige Concreting Additives P/L is limited to the cost of the product purchased.
