

Waterproofer WT

Addcrete Waterproofer WT is a ready to use high quality ammonium stearate based waterproofing liquid. When used in Portland cement based mixtures it forms calcium stearate, a highly water repellent material. This coats the capillary pores of the cement, substantially increasing the water resistance.

Addcrete Waterproofer WT greatly minimises the absorption and permeation of water in concretes, renders, bagging mixes and mortars both above and below ground level. **Addcrete Waterproofer WT** is also suitable as a clear dampcourse.

Advantages

- Improves the water resistance of cement mixes, renders, bagging mixes and mortars.
- Improves workability.
- Can be used above or below ground level.
- Available in 20ltr, 5ltr, 2.5ltr and 1ltr containers.

Instructions

1. Use **Addcrete Waterproofer WT** at a rate of 1 litre per 40kg bag of cement.
2. Dilute 1 litre of **Addcrete Waterproofer WT** to 3 litres of gauging water. Mix this with dry materials. Add additional water until desired consistency is achieved.

Coverage Estimates

Render / Topping	1 litre of Addcrete Waterproofer WT when mixed with sand/cement (3:1) will lay or render approx 10m ² x 12mm thick.
Mortar	1 litre mixed with required sand/cement (3:1) will lay approx 200 bricks.
Concrete	8 litres per m ³ .

PRODUCT LIABILITY:

Prestige Concreting Additives P/L will not accept responsibility howsoever it may arise and whether consequential or otherwise in connection with supply or use of these goods other than the responsibility for the merchantable quality of the goods and such responsibilities mandatorily imposed by the applicable Statutes. To the extent allowed by such Statutes, the liability of Prestige Concreting Additives P/L is limited to the cost of the product purchased.
